

ACECUT[®]

Automatic Biopsy System

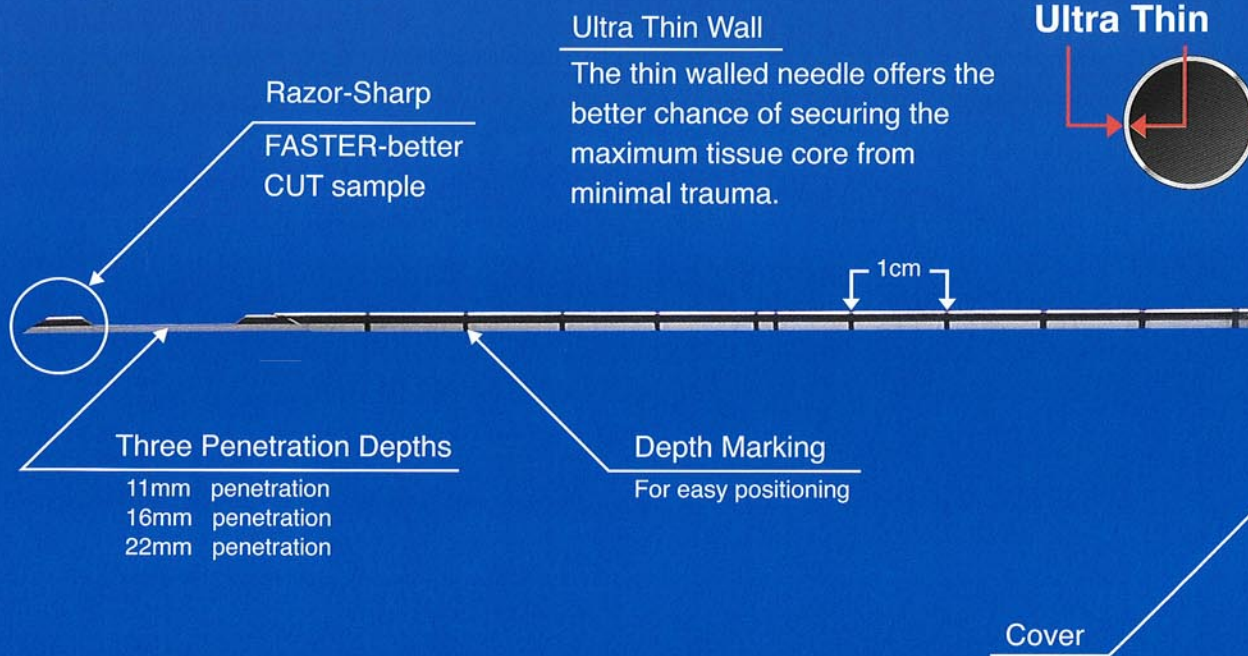

ACECUT is a fully disposable automatic biopsy system developed for taking a range of tissue specimens including those from the breast, prostate, liver and kidney. Designed to the highest specification ACECUT allows samples to be taken using a simple single-handed operation.

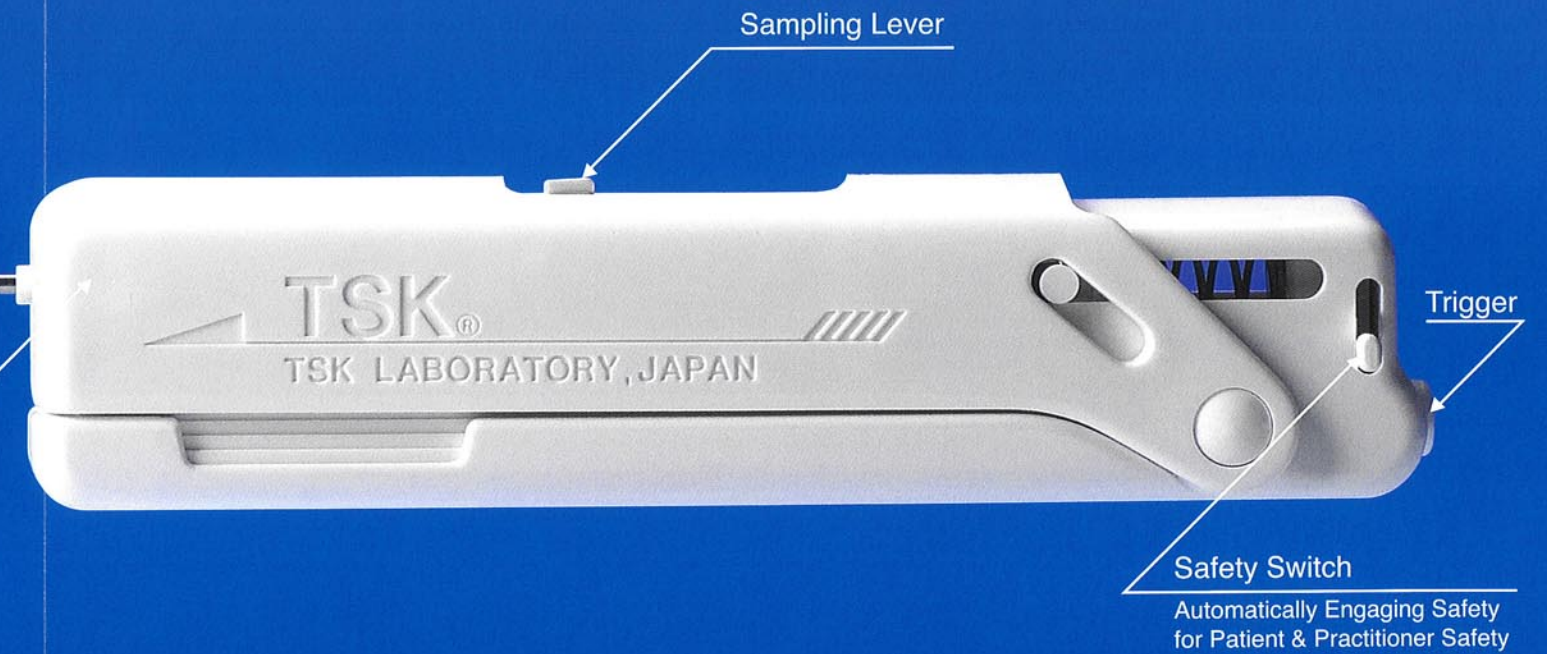

Safe and Easy Specimen Removal

- By sliding the sampling lever backwards (as illustrated on the left) the sample can be removed by a simple one-handed operation
- Don't ever lose a sample

Strongest Spring

Safety

Fully Disposable

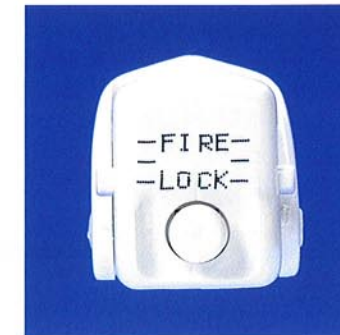

Full Physician Control

1G UP Co-Axial Guide Needle

For a perfect fit, less traumatic & Better Biopsy

ECHOGENIC treatment for better visualization.

Full Control

- "2 stage" or "Stepped" firing button allows the physicians choice of SEMI-AUTOMATIC or Fully AUTOMATIC firing.
- Semi-Automatic firing allows:
1. The Sample Notch to be forwarded and the position of the Notch to be verified under Ultrasound.
 2. An Ultrasound Image to be taken, saved/printed for post-procedure verification.
 3. The Sample Notch to be adjusted forward or back (22mm throw) to center in the suspect tissue.
 4. Allows time for the tissue to settle in the sample notch before cutting for a full sample notch; larger biopsy specimens.

Alternatively, the physician can choose Automatic firing for a shorter procedure.
